The MightyMic L Pack microphone kit brings big sound from a small microphone. Don't be fooled by the compact size. This is a high quality condenser microphone that does not need any batteries as it is powered by the device. So you never get stuck doing that big recording only to find out the batteries are dead. Just plug it into the headphone jack of the MightyMic Pro and clip the mic to any convenient position near you. While using an optional app like MoviePro or Filmic Pro you can listen to the sound while recording video and adjust the volume. For audio recording just open the GarageBand App and select the microphone input and set the App to monitor the sound. It works with iPhone, iPad, and iPod Touch and other devices.

Package includes foam windscreen, carrying pouch, mic clip and microphone.

iPhone, iPad, and iPod Touch are registered trademarks of Apple Inc.
